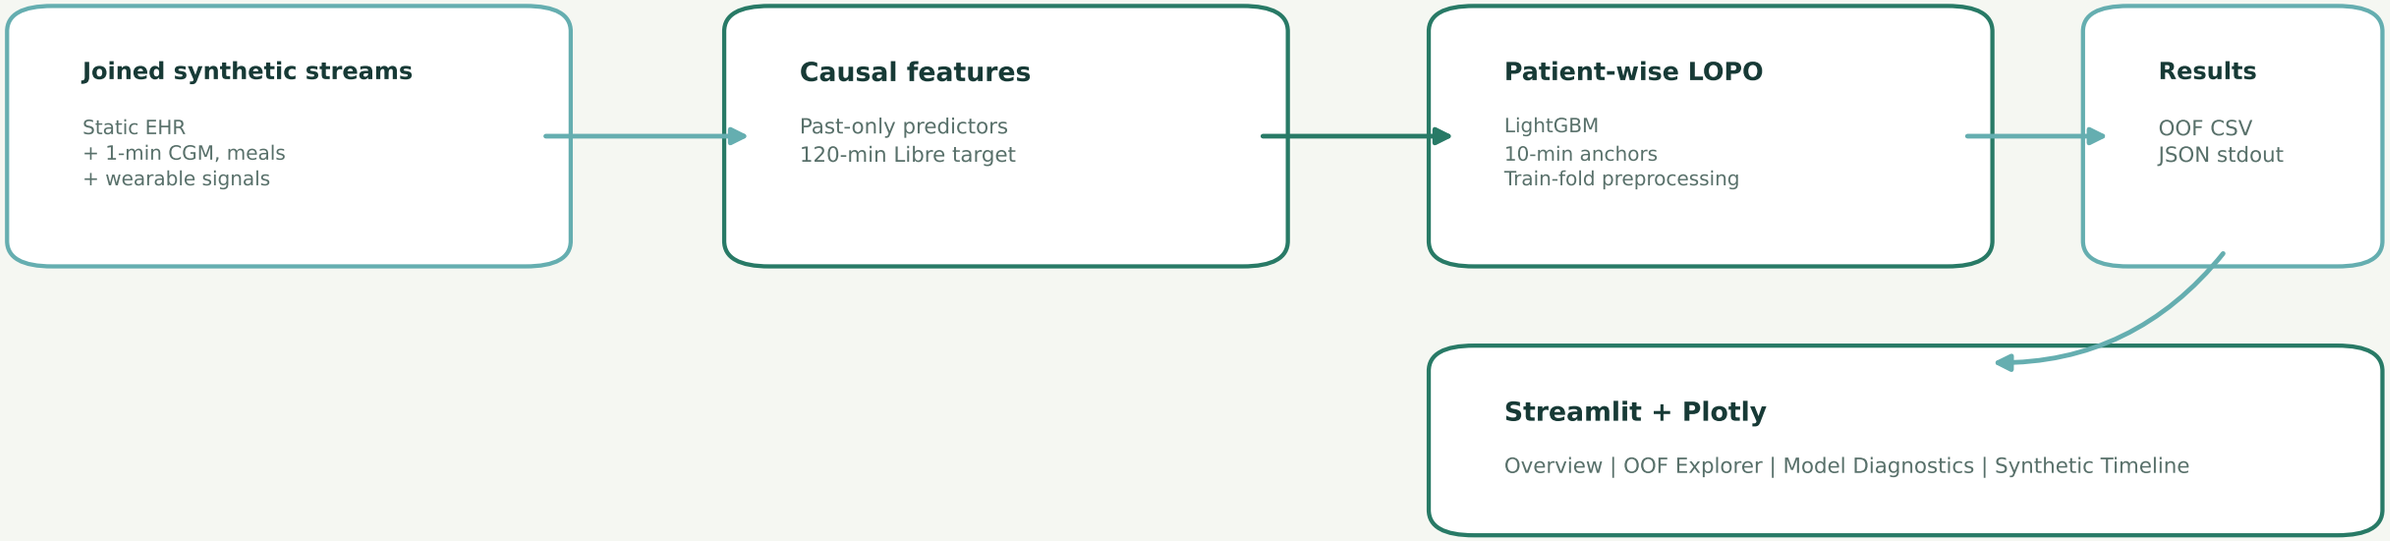
GlucoTwin India | Architecture

Synthetic EHR profiles join a generated 1-minute dynamic fixture by participant ID.

LOCAL DATA ENGINEERING PATH (OPTIONAL; NOT USED BY THE DEMO)

SYNTHETIC DASHBOARD PATH



New scenario: validated current/history inputs + manual meals -> same 151 ordered predictors -> fresh synthetic-only fit -> separate output.

src/synth_data.py writes a separate 5-minute CSV series; the runner reuses its profile helper, not that dynamic CSV.

SYNTHETIC RESEARCH DEMO — NOT FOR CLINICAL USE
